Provides complete Dashboard Environment

Code free Development Platform.

The screenshot displays the SMART LATTICE development platform interface. The top navigation bar includes 'Publish App' and 'Deploy App' buttons, along with a user profile 'Signed in as: Satyanarayana Raju'. The main workspace is titled 'Write State' and shows a configuration for a 'Business Rule' named 'Product Master Onsave for Product Master To be called: Every time the Entity is saved'. The rule is triggered when 'Record Status' is equal to 'D'. It includes a 'For-each record of Project Library Details' loop with 'Record Selection Criteria' (Security Override No) and 'Where All of the following apply' conditions (Project is defined field, variable or constant; Part No. is equal to Part No). The rule also includes an 'Update Product Master' section with 'Apply Business Rule On Save No' and several 'Process business rule' actions: 'Generate PartNo Combo For StockEntry', 'Generate Part No Combo1', 'Generate Product List', 'Generate Product List For Name', and 'Activity Design Serach for Cage Combo'. The interface also shows a 'Solution Explorer' on the left with a tree view of the application structure, including 'Product Master', 'BomPrint', 'Data Sources', 'PCBDetails', 'BOMDetails', 'Parameters', 'Layout', 'Report Wizard', 'Design', 'Header', 'Page', 'Section', 'Table', and 'Table Row'. A 'Properties' window at the bottom left shows the 'Data Source Name' as 'PCBDetails' and the 'Business Rule' as 'PCB Design Fo...'. The bottom of the image features a decorative green grass border.
